*One*

# SOLEIL One

Soleil One is a non-compensated lens design specially engineered for progressive wearers looking for a digital and economic solution. Distance and near vision is balanced to provide wearers with a comfortable all-purpose lens.

## ENTRY-LEVEL DIGITAL TECHNOLOGY

Prime Advanced Progressive lenses are produced with digital-surfacing technology that assures clear vision and good quality. The lens offers stable and generous areas for both distance and near vision, and its advantageous power transition allows the eye to move more naturally through the corridor.

The Rx surface is calculated using a pure geometrical method that produces lenses with similar optical performance as conventional lenses, but with the advantages of the digital process, like flexible designs, variable corridor lengths and insets.

## FEATURES & BENEFITS

- Non-personalized daily-use progressive lens
- Balanced visual fields for all distances
- Variable inset
- Thickness reduction
- MFHs: 14, 16, or 18mm
